SAATHVIK MAHESHUNI

New York, NY | 929-783-6609 | sm13125@nyu.edu
linkedin.com/in/saathvikmaheshuni | github.com/Saathvik007 | public.tableau.com/app/profile/saathvik.maheshuni

Graduate student in Management of Technology at NYU with a computer science background and applied work across econometric case analysis, predictive modeling, financial valuation, and interactive reporting. Published IEEE co-author who builds analyses that reproduce end to end and writes findings for non-technical readers.

EDUCATION

New York University, Tandon School of Engineering, Brooklyn, NY — May 2027
Master of Science, Management of Technology | *GPA: 3.611/4.0*
Relevant coursework: Business Analytics, Data Visualization, Financial Analysis for Tech Managers, Economics and Strategy

Institute of Aeronautical Engineering, Hyderabad, India — May 2025
Bachelor of Technology, Computer Science and Engineering (Artificial Intelligence and Machine Learning)

TECHNICAL SKILLS

Programming and Analysis: Python (pandas, NumPy, scikit-learn), R, SQL, Advanced Microsoft Excel
Quantitative Methods: Regression, matching estimators, bootstrap inference, shift-share decomposition, classification
Financial Modeling: Discounted cash flow, net present value, internal rate of return, WACC, CAPM
Visualization and Reporting: Tableau, Power BI, automated PDF and Word report generation

ANALYTICAL PROJECTS

Southwest–AirTran Merger Retrospective | Python, BTS airline ticket microdata, expert-style memorandum — September 2026
github.com/Saathvik007/southwest-airtran-merger-retrospective
- Built the dataset from 36 quarters of federal DB1BMarket ticket records in Python (pandas, NumPy), isolating 24 airport pairs where Southwest and AirTran both flew before the merger.
- Paired each with a control route by nearest-neighbor matching without replacement on pre-merger fare, passengers, distance, and concentration, then bootstrapped 10,000 resamples for confidence intervals.
- Decomposed the +1.3% route-average result with a shift-share analysis, isolating +2.0% from the loss of AirTran's lower fares and leaving −0.7% from actual pricing.
- Rebuilt the design around Southwest's own fare after pre-trend tests failed, caught a geographic confound with a placebo test, and reported a range rather than a single estimate.

Predictive Employee Attrition Analysis | Python, two-person team — May 2026
- Built a classification pipeline on 1,470 employee records and 35 features, applying SMOTE to correct an 84/16 class imbalance and tuning with five-fold stratified cross-validation.
- Selected tuned logistic regression (63.8% recall, 0.780 ROC-AUC) over higher-accuracy models after showing that predicting "stayed" for everyone scores 84% accuracy while identifying no departures.
- Found attrition of 30.5% among employees working overtime against 10.4% among those not, and presented it to a non-technical audience as an association rather than a causal effect.

Corporate Acquisition Financial Analysis | Excel — January – May 2026
- Valued a franchise acquisition with discounted cash flow models for NPV and IRR, deriving the discount rate from WACC and CAPM, and reconciled competing scenario models into a written recommendation.

Automatic Detection of Bone Fracture Using Deep Neural Models | Peer-reviewed IEEE conference paper — March 2025
doi.org/10.1109/InC465408.2025.11256433
- Co-developed a hybrid CNN and ResNet model for fracture detection on radiographic images, reporting 99% accuracy on the paper's evaluation set.

Tableau Public Portfolio | Interactive dashboards on public datasets — January – May 2026
- Built five dashboards on public datasets including Medicare Part D drug spending, NYC motor vehicle collisions, and Fortune 1000 company performance.
- Applied window calculations, running totals, and parameter-driven filtering so readers can explore the data themselves rather than read a static summary.

EXPERIENCE

New York University, New York, NY

Graduate Event Assistant, Stern School of Business MBA Careers Office — September 2026 – Present
- Facilitate check-in for students and employer representatives at MBA recruiting events and corporate presentations.
- Coordinate room layout and audio-visual setup with the events team for daytime and evening programs.

Academic Proctor — March 2026 – Present
- Maintain confidential examination records under FERPA, applying a consistent verification process to identify discrepancies.
- Review examination materials for accuracy and completeness with a team of proctors under fixed procedural timelines.

LEADERSHIP AND ACTIVITIES

Volunteer, Google Build with AI Hackathon, **NYU Graduate Student Council** — March 2026

Event Organizer, Consortium Fest, **Institute of Aeronautical Engineering** — July 2025

Class Representative, **Institute of Aeronautical Engineering** — December 2021 – May 2025
